Informed Consent Form

Dear Participant,

CO 1

thank you for your participation in the study.

In this study, you'll be asked to perform certain tasks wearing Microsoft HoloLens and to answer some questions. The whole process will take around 30-60 minutes. You are free to stop, quit the study and retract your data at any time during the study with no further consequences. **Privacy:** Original data obtained from this study will be anonymized and only processed in aggregate. In such form, it might be published in academic journals, presentations or other media, but never in a way that would allow individual identification. One week after the study it might no longer be possible to retract your data from such aggregated analyses.

If you have any questions, please contact Jiongyan Zhang via jiongyan.zhang@tum.de.

I confirm I volunteered to participate in this study.

I confirm I was allowed to ask questions and that I was provided with responses.

I confirm I was presented with this document prior to the beginning of the study.

I confirm and I understood my right to quit the study at any time.

I confirm I was informed that a conversation with researcher will be recorded after navigation during the study.

Remote sensing

This questionnaire consists of several statements about your spatial and navigational abilities, preferences, and experiences. After each statement, you should circle a number to indicate your level of agreement with the statement. Circle "1" if you strongly agree that the statement applies to you, "7" if you strongly disagree, or some number in between if your agreement is intermediate. Circle "4" if you neither agree nor disagree.

TASK1: Please draw and label all the spatial information you remember, including rooms, room names, stereoscopes, fire distinguisher, garbage can and anything else you can recall.

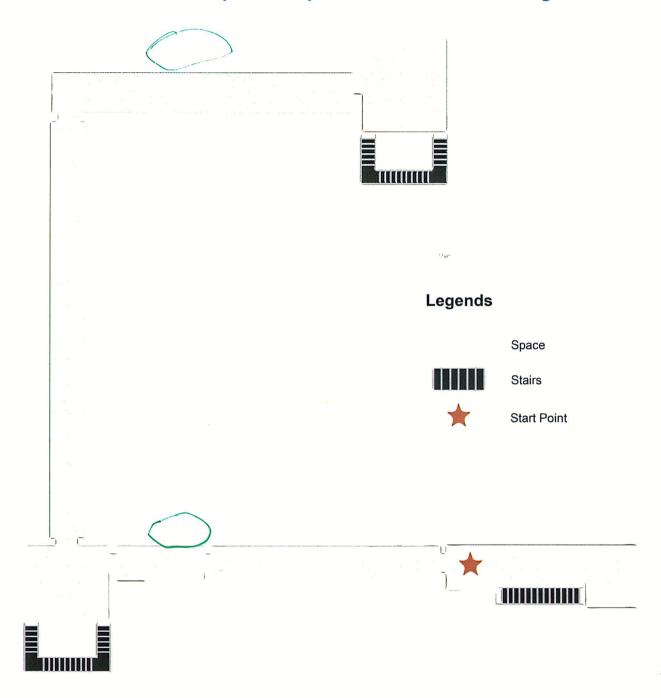

TASK 2: Please complete the following questionnaire ("1" = not at all, "7" = very much).

COLORS stands for the color of landmarks including transparency, LABELS stands for the label text and icon, LANDMARKS stands for the shape, position and orientation etc.

NASA Task Load Index

Hart and Staveland's NASA Task Load Index (TLX) method assesses workload on five 7-points scales. Increments of high, medium and low estimates for each point result in 21 gradations on the scales.
